Searching for Ultra Rare Processes Using the Large Hadron Collider

$t \to q\gamma$

Jason Barkeloo

January 16, 2020

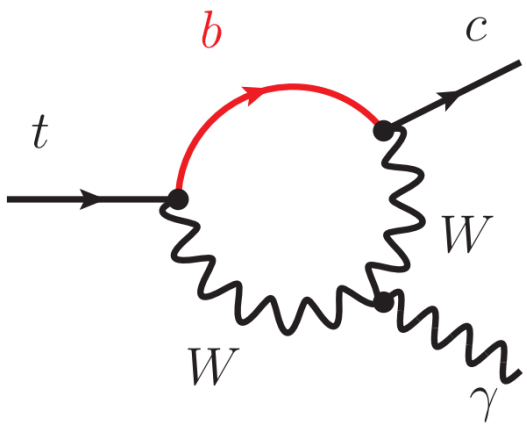
Overview

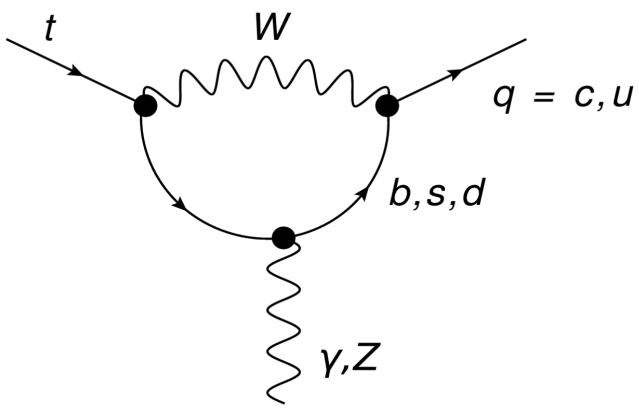
Outlook

- Fake rates have been calculated and applied
- Full systematics samples (slowly) running on the grid
- Fitting machinery mostly in place now, should be ready once samples finish
- Questions?

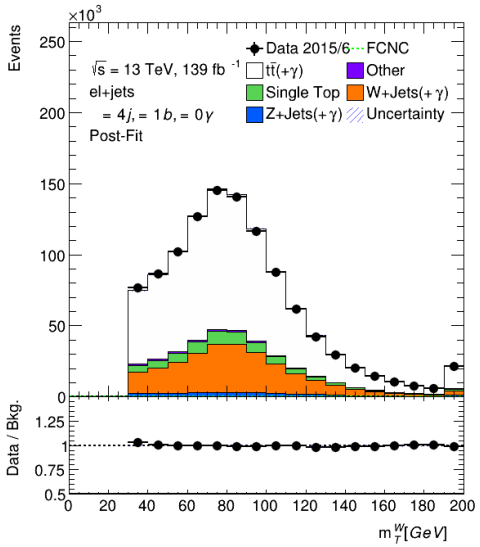
Backup

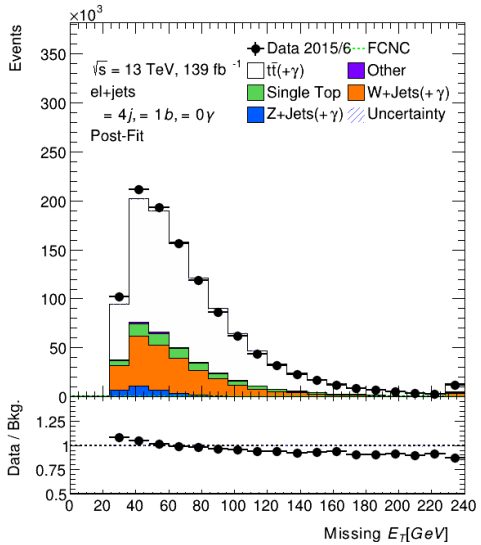
FCNC Diagrams

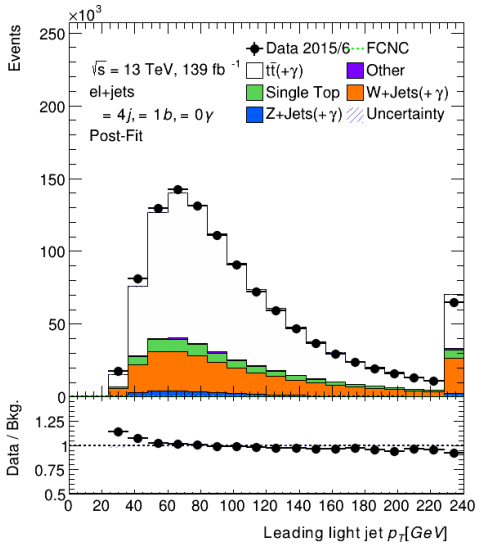


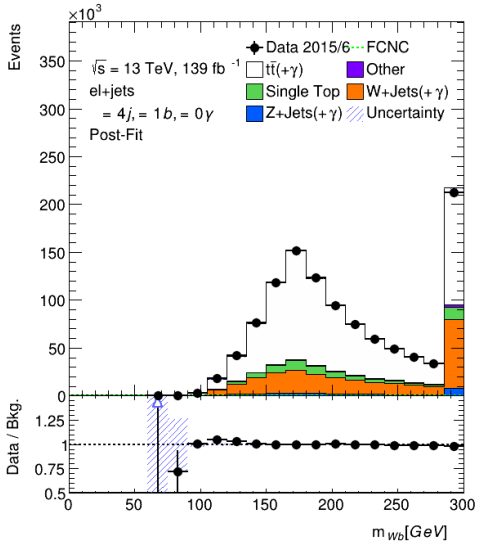


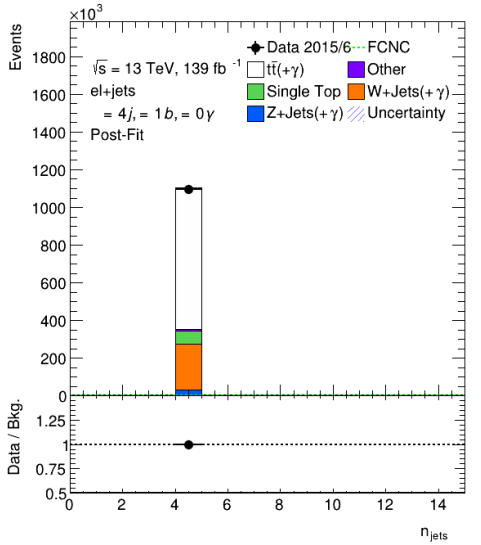
No Photon Region SF Applied in Val Region

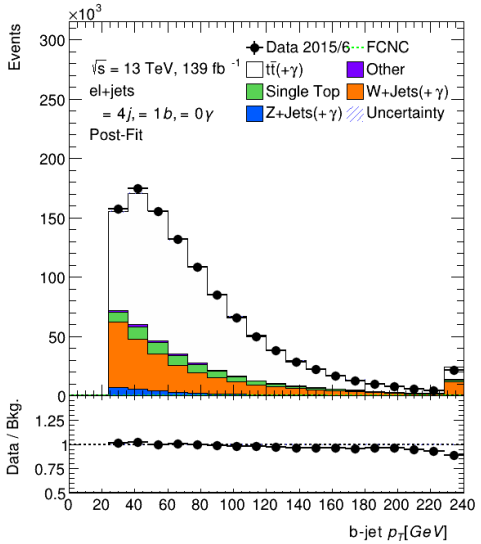












Jets/AntiKT

$$d_{ij} = min(\frac{1}{p_{ti}^2}, \frac{1}{p_{tj}^2})\frac{\Delta_{ij}^2}{R^2}$$

$$d_{iB} = \frac{1}{p_{ti}^2}$$

$$\Delta_{ij}^2 = (\eta_i - \eta_j)^2 + (\phi_i - \phi_j)^2$$

- Find minimum of entire set of $\{d_{ij}, d_{iB}\}$
- If d_{ij} is the minimum particles i,j are combined into one particle and removed from the list of particles
- If d_{iB} is the minimum i is labelled as a final jet and removed from the list of particles
- Repeat until all particles are part of a jet with distance between jet axes Δ_{ij} is greater than R

$$\mathcal{L}^{eff}_{tq\gamma} = -e\bar{c}\frac{i\sigma^{\mu\nu}q_\nu}{m_t}(\lambda^L_{ct}P_L + \lambda^R_{ct}P_R)tA_\mu + H.c.$$
